

Supplemental Materials

(Lelo de Larrea-Mancera et al., 2023)

The equivalent analysis depicted in the main manuscript in Figure 2 is shown here using raw rather than z-scores. The results of significant testing are very similar and do not change the direction of the outcomes. These supplemental materials are intended for reference only, see the main manuscript for interpretation.

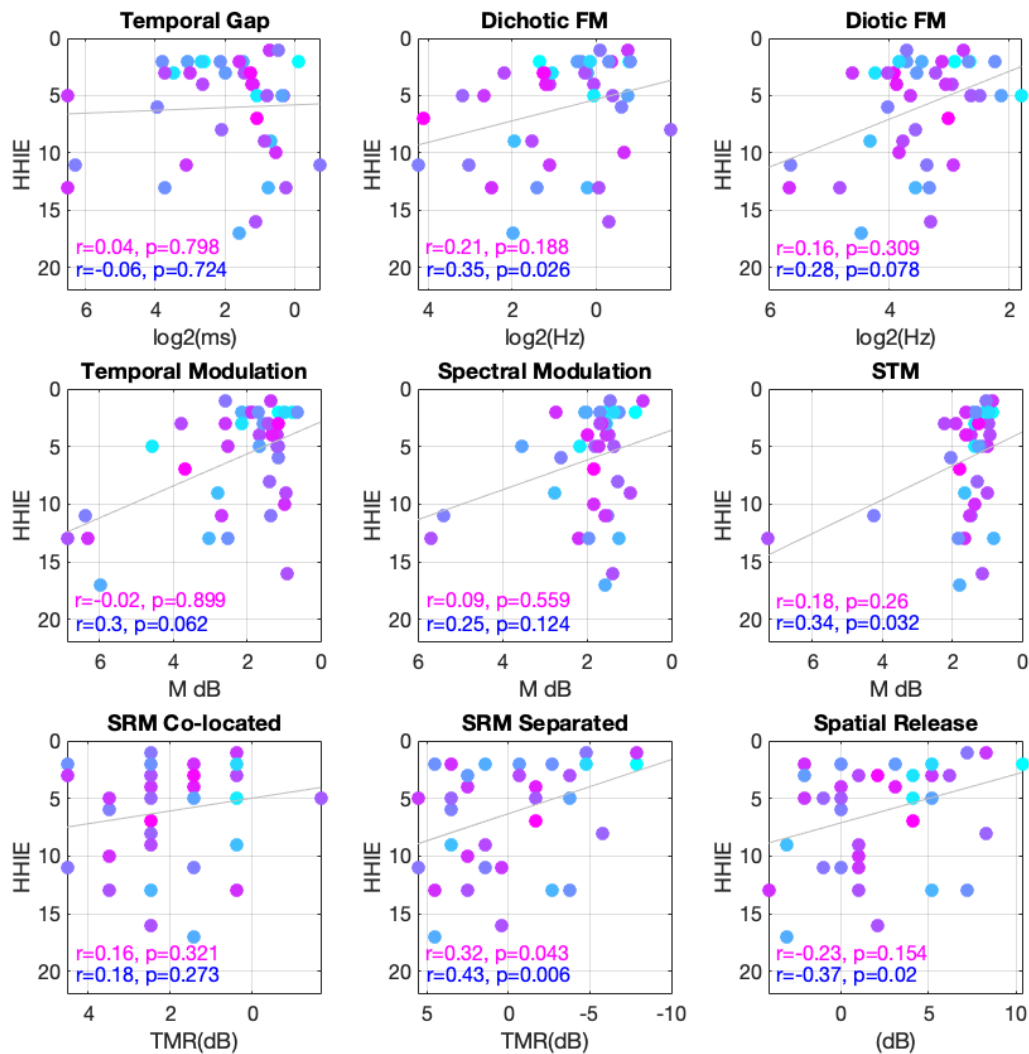

Figure 2. Spearman correlations between the self-reported hearing ability (HHIE-S) and central auditory measures. Participant age is depicted as color and its correlation to each measure depicted in magenta.
